

Student safety has never been so simple.

SHADOWME™ is the first user-controlled smartphone-based personal security system. When you need assistance or help this application will automatically contact the people and organisations you designate thereby dramatically increasing response time to your situation anytime, anywhere!

With SHADOWME™ you have protection wherever and whenever you need it. Think of it as your own personal security system.

With Campus Security you get a great deal more...

Switch your school security needs to Campus Security, save money, and protect your students with this FREE App!

Simply contact Campus Security and one of our friendly team will discuss just how we can protect your school and students.

Keeping
students safe
...the smart way

Hear what the students say...

“With SHADOWME™ on my phone I feel safe to go out anytime to visit my friends, work late in the library or play sports after school. It’s easy to use, all of my friends use it, and best of all it’s FREE!”

1

Input details

Users must have a Smart Phone with a data package and GPS capability.

Go to the SHADOWME™ website and you will be given a SHADOWME™ registration number by your school/facility.

Input your contacts/associated info (i.e. preferred call list, phone numbers, email addresses etc) onto the SHADOWME™ website (<http://shadowme.co.nz>).

Simply input your contacts including family, friends, school security personnel, or anyone who will work immediately to provide you the help you need.

2

Start session

An easy-to-use menu appears on your iPhone/Android. With a touch of a button you can proactively activate your security session allowing the system to silently shadow you on your journey.

The App for you mobile device is available by searching Android phones play store or the apple equivalent, for SHADOWME™ NZ; you will then need to register on the app for the system to work.

Once you are registered, you initiate a session by touching the Blue SHADOWME™ button (the panic button should only be used in the event of an emergency).

Once activated the application tracks your movements via GPS. To stop the session, touch the Red Deactivate button and enter your code.

3

You're safe

Upon emergency escalation or indication of duress (panic feature) an outbound call goes out to your specified contact list informing them of your last known position. This information may also be sent via the following forms of media at the same time:

- Text Message
- Email Notification
- GPS/Dashboard transmission

With the SHADOWME™ app you have protection whenever you need it. Think of it as your own personal security system.

This is a free service that is provided by sponsors, so you may receive emails or texts from these sponsors from time to time.
